DETAILED ACTION

Allowable Subject Matter

Claims 1-23 are allowed.

The following is an examiner's statement of reasons for allowance: The prior art of record does not disclose or teach a magnet disposed at an axial end of a linear actuator for generating a magnetic flux in a first and second gap in combination with the other features of claims 1, 22 and 23. Higham et al. 4,761,960 A discloses a linear actuator with a coil 48, 49 first 30, second 43 and intermediate yoke parts 30 where the intermediate yoke part forms a first gap and second gap with a magnet 56 that generates a magnetic field in the first and second gaps as shown in figure 2. As explained in column 4 lines 51-52, the magnet provides magnetic flux for actuation of the motor. Knutson 4,127,835 A teaches placing two magnets, one at each end of a linear actuator with the magnets having opposing pole orientations, in order to supplement the flux created by coil current at one end and to oppose the flux created by the coil current at the other end. The magnetic field of one magnet might influence the magnetic field produced by the other in the gap, but one magnet does not produce magnetic fields in a first and second gap. Besides not teaching the structure needed in the Higham et al. reference to satisfy the claim language, no motivation has been found for combining Knutson and Higham et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
